

Ban sa kate School is a small school. There are 52 students from kindergarten to grade 6. Ban sa kate School is located on Tambon Prakru, Amphoe Muang, Buriram province.

While taking us to see the school's water tanks, the principal said that all of students drink rain water which unclean. We saw the very old and broken water tanks which cannot keep the water inside anymore.

Drinking water is the big problem of Ban sa kate School. The water source is rain water. The principal sent the water sample to Department of Groundwater Resources to check its quality and found the water quality is substandard. There are high Iron, Sulphate, Chloride and Total dissolved solids.

“It’s very good news for us to get this fund. We attend to install the RO water filter, then, students can drink the clean water”

At present, Ban sa kate School's project is done. They had installed a new water filtration. That makes sure all of students and teachers in this school have a fine drinking water. And that's great for their health and sanitation.
